

N° 24,560

A.D. 1903

Date of Application, 12th Nov., 1903

Complete Specification Left, 12th Aug., 1904—Accepted, 12th Nov., 1904

PROVISIONAL SPECIFICATION.

Improved Appliances for the Treatment of the Fingers and Finger-nails.

I, CECIL JOHN WILLIAM SIMPSON, of 31, Cromwell Road, Nottingham, Surveyor, do hereby declare the nature of the said invention to be as follows:—

The present invention relates to means whereby broad or unshapely finger tips and nails may be tapered or afforded a pretty or pleasing appearance.

5 Such means consist of appliances which are placed upon the finger tips and are worn in that position at convenient times.

The appliances above referred to will operate to gently compress and mould the finger tip and nail into the required shape. Consequently they will usually be of an elastic nature.

10 A simple form of appliance according to this invention will consist of a piece, clip or band of sheet metal or other suitable material, the cross-section of which may be round, oval, or that of a circle or oval with indented sides and, or, flattened top, or of other shape, or the cross-section of the appliance may suit the shape of a finger tip and nail, and the appliance may be split
15 longitudinally or tapered longitudinally. The tendency of this appliance, when placed upon a finger tip and nail, is to gently compress and shape the same.

Dated this 11th day of November 1903.

J. A. COUBROUGH,
Chartered Patent Agent.

COMPLETE SPECIFICATION.

Improved Appliances for the Treatment of the Fingers and Finger Nails.

25 I, CECIL JOHN WILLIAM SIMPSON, of 31, Cromwell Road, Nottingham, Surveyor, do hereby declare the nature of this invention and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement:

The present invention relates to means whereby broad or unshapely finger
30 tips and nails may be tapered or afforded a pretty or pleasing appearance.

Such means consist of appliances which are placed upon the finger tips and are worn in that position at convenient times.

The appliances above referred to will operate to gently compress and mould the finger tip and nail into the required shape. Consequently they will usually
35 be of an elastic nature.

[Price 8d.]

Improved Appliances for the Treatment of the Fingers and Finger-nails.

An example of appliances according to this invention is illustrated in the annexed drawing, Figure 1 being a side view and Figure 2 a cross section thereof.

It will be seen on reference to the drawing that the improved appliance consists of a clip of sheet metal, the same being tapered and split longitudinally, 5 its cross section being circular as shown.

The tendency of the appliance illustrated, when placed upon a finger tip and nail, is to gently compress and shape the same.

If desired the cross section of the appliance, instead of being circular as shown, may be oval or may take the shape of the finger and nail. 10

Having now particularly described and ascertained the nature of this invention and in what manner the same is to be performed, I declare that what I claim is:—

A device possessing some elasticity and adapted to be placed upon and to gently compress the finger tip and finger nail, substantially as and for the 15 purpose herein set forth.

Dated this 11th day of August 1904.
